

Auto Rostering with Kiddom

Auto Rostering

Auto Rostering synchronizes staff, student, and section information from your selected rostering method to your Kiddom rosters. Rosters are generally read-only but can allow for some *manual* changes.

Why should you Auto Roster?

We highly recommend Auto Rostering because it streamlines the process of capturing and reflecting updates to your rosters, daily. This feature not only saves precious time for you and your educators but also ensures a seamless experience by automatically creating, updating, and managing roster data throughout their entire lifecycle within Kiddom.

For more information on some of our integration options, please visit our [Integration Discovery](#) article.

Providing Data

Once you are ready to set up your student and staff accounts in Kiddom, our Roster Support Team will connect with your Technical Director to set up your chosen rostering source. We can assist asynchronously or schedule a quick call to verify data-sharing. Just let us know what works best for you!

Single Sign-On (SSO)

SSO allows students and staff to log in through your district portal to access all connected apps, including Kiddom, with just one click. It improves security by reducing weak passwords, provides centralized management for admins, and provides a seamless user experience across platforms.

Examples of SSO options include, but are not limited to:

- Clever SSO
- ClassLink Launchpad
- Google SSO

Setup and Timeline

Success at Kiddom

At Kiddom, we understand that a successful implementation involves a collaborative approach where every step is carefully planned and executed. From the initial setup to ongoing support, we ensure that each phase is aligned with your unique needs and goals in mind.

Data Privacy

Your privacy matters! Explore [Kiddom's Privacy Policy](#) to see how we protect your data.
